Hursley Hack;

IBM's first Graduate and UP Hackathon

Challenge 1: Bank of Hursley
Department: CICS

#web, #frontend, #design

Details

The First Bank of Hursley needs a face lift! The existing user interface needs to be re-imagined for their growing customer base. You can use existing JSON REST APIs to emulate transactions and the rest of the technical and creative decisions are up to you. Build a working prototype with a well defined Minimum Viable Product (MVP) that can be extended by the core Hursley Bank Staff. Once complete, the delivered prototype will not only allow the Bank to extend their digital reach, it will also show REAL customers how to create incredible experiences based on a known API.
